PROFESSIONAL SUMMARY

Innovative BSIT graduate and Full-Stack Software Developer with 2 years of independent freelance experience architecturalizing high-performance web applications and digital management systems. Proven track record of delivering production-grade solutions using Next.js, React, and Supabase. Highly expert in leveraging AI-augmented workflows (Cursor, LLM APIs) to expedite software development lifecycles, optimize database performance, and write enterprise-ready, clean code.

TECHNICAL SKILLS

- **AI & Productivity:** AI-Assisted Development (Cursor, Copilot), Prompt Engineering, OpenAI / Gemini API Integration
- **Frontend Development:** Next.js, React, TypeScript, Tailwind CSS, Framer Motion, Shadcn UI.
- **Backend & Infrastructure:** Node.js, PHP, REST APIs, Supabase, Firebase, Vercel, Postman.
- **Database Management:** PostgreSQL, MySQL, Relational Database Design (ERDs & Schemas).
- **Version Control & Tools:** Git, GitHub, Figma, VS Code.

TECHNICAL FREELANCE PROJECTS

Listahan App (Digital Ledger & Analytics Platform) Next.js, Supabase, Shadcn UI, Zustand, Tailwind CSS

- **Problem:** Small retail (Sari-sari) store owners lose revenue due to manual, paper-based transaction logs and error-prone debt tracking.
- **Solution:** Engineered a secure, cloud-based digital ledger application featuring real-time financial debt tracking and automated dashboard analytics.
- **Impact:** Implemented optimized state management via Zustand and real-time database syncing with Supabase, reducing manual recording friction and providing owners instant financial health clarity.

ApplyflowPH (Offline-First Job Application Tracker) Next.js, Tailwind CSS, Supabase, Shadcn UI

- **Problem:** Job seekers struggle with fragmented application tracking across various corporate boards, leading to missed interview timelines.
- **Solution:** Developed a comprehensive, local-first data dashboard architecture designed specifically for managing multi-stage job search pipelines.
- **Impact:** Built an offline-capable state synchronization engine that caches inputs locally and seamlessly push queues to a cloud database upon reconnection, eliminating data drops.

Byte & Brew (RFID Digital Loyalty Platform) React, TypeScript, Supabase, RFID Hardware Integration, Tailwind CSS

- **Problem:** Commercial establishments struggle with customer retention due to damaged or easily misplaced physical paper punch cards.

- **Solution:** Architecturalized an end-to-end customer rewards ecosystem comprising an interactive customer portal and a high-performance admin analytics panel.
- **Impact:** Integrated hardware-to-software logic using physical RFID tags for secure user authentication, instantly updating cloud point balances via Supabase real-time subscriptions.

WORK EXPERIENCE

Full-Stack Web Developer & Technical Consultant (Freelance) | 2024 – *Present*

- Architected, tested, and deployed modern web applications, database schemas, and technical software systems for multiple capstone and education clients.
- Designed enterprise-ready database structures, drafted complex entity-relationship diagrams (ERDs), and maintained codebase version control systems using Git and GitHub.
- Translated non-technical client requirements into working, scalable product features while strictly managing sprint schedules and delivery timelines.

EDUCATION

Bachelor of Science in Information Technology (BSIT)

Bicol University Polangui Campus | *Graduated: July 2024*

Academic Performance: General Weighted Average (GWA): 1.76
